

## Benefits

- Your students will make progress such that they are better able to access a suitable KS3 curriculum
- You will develop your pedagogic and content knowledge of KS1 and KS2 maths.
- You will consider approaches which support all students to reason mathematically
- You will work as part of a professional learning community to reflect on their approaches, deepen their understanding about effective approaches, and refine their practice

These **Work Groups** are fully funded by the Maths Hubs Programme, so are **free** to participating schools.

Fully funded

# Securing Foundations at Year 7

## Work Groups

Discover ways to help students who need additional support to make good progress in KS3 and beyond

## What is involved?

Participants in this project will gain access to high-quality resources designed by experts in the pedagogy and expectations of maths at both KS2 and KS3. This project aims to provide professional development and resources for secondary maths teachers so they are better equipped to support students with gaps in understanding from previous Key Stages. Teachers will develop their understanding of KS1 and KS2 maths curriculum domain-specific knowledge and pedagogical content knowledge in order to better enable these students to access the KS3 curriculum.

## Who can take part?

This project is for teachers with Year 7 students who have not met age-related expectations in maths, particularly students whose attainment is in the bottom 20-30% of the national cohort at the end of KS2. The Work Group is suitable for experienced or novice teachers.
